Erik Peterson

Director of Support Engineering, Acquia, Inc.

Acquia™

<https://drupal.org/user/166970>

# Drush

Drupal Shell but pronounced with short “u”

Command line access to drush

<https://github.com/drush-ops/drush>

# Installation

<http://docs.drush.org/en/master/install/>

```
wget http://files.drush.org/drush.phar
```

or

```
composer global require drush/drush
```

# How to call Drush

Get “drush” into your \$PATH or as an alias

in .bashrc or .bash\_profile

```
export PATH=/path/to/drush_dir:$PATH
```

OR

```
alias drush=/path/to/drush_dir/drush
```

OR

```
ln -s /path/to/drush_dir/drush /usr/local/bin/drush
```

# Drush context

Different results based on where you are.

Location of docroot:

- current directory
- `--root=/var/www/html`

For multisite:

- `--uri=mysite.com`

# Common commands

status (st)

cron
